Walchand COE, Sangli

Eighteen years building the data platforms large enterprises run on — and, for the last year, **shipping the applied-AI tooling that sits on top of them.**

WHAT I BUILD

01

Cloud Data Platform
2025 – present

Architect of the batch and real-time streaming platform for a **UK tier-1 retail bank**. Event-driven ingestion, hybrid orchestration bridging a legacy enterprise scheduler with cloud workflows, modelled warehouse, everything provisioned as code.

Confluent Kafka · Cloud Composer · Airflow · dbt · BigQuery · Terraform · CI/CD

Applied AI
open source

A published agent ecosystem built in the open: a **terminal coding agent on npm**, and the Rust tooling underneath it — embedding search with an ANN index written from scratch, offline speech recognition, and token-efficient web retrieval.

Rust · TypeScript · ONNX Runtime · HNSW · BM25 hybrid retrieval · MCP · 25+ LLM providers

Payments & Cards
2022 – 2025

Led modernisation of **Digital Cards** — Add to Wallet, card controls, View PIN — from on-premise to GCP, with the secure microservice and cross-cloud API patterns a regulated estate needs.

GCP · microservices · API gateways · containerisation · compliance

SHIPPED, IN PUBLIC

02

REPOSITORY	STACK	WHAT IT DOES
hoocode	TypeScript	Deterministic terminal coding agent, published to npm. Permission gate on every edit and command; four scoped modes; MCP servers and subagents. Four packages including a unified LLM API across 25+ providers.
embeddingsearchtools	Rust	Embedding search engine. MiniLM via ONNX Runtime with int8 weights bundled into the binary; exact and HNSW approximate indexes; BM25 lexical fusion for hybrid retrieval; mmap-friendly store, CLI and long-lived daemon.
voicetools	Rust	Offline speech-to-text for the terminal. Microphone capture through voice-activity detection into Parakeet-TDT on ONNX Runtime, 25 languages, with a Whisper fallback.
webtools	Rust	Token-efficient fetch and search for LLM agents. Reference-style URL preservation turns links into single-token markers; output is capped to a token budget.

RECOGNITION

03

2024
Banking Tech Awards
Self-serve fraud journey — architect

2025
Card & Payments Awards
Self-serve fraud journey — architect

\$600K
Annual cost removed
Customer preference API on GCP, Sears

CLIENT ENGAGEMENTS

04

CLIENT	DOMAIN	ENGAGEMENT
Lloyds Banking Group	Banking UK	Digital cards modernisation to GCP, then the streaming and batch data platform.
Sears Holdings	Retail US	Preference Center API on GCP; Teradata to BigQuery migration; API management layer across a multicloud estate.
Saudi Telecom	Telecom SAU	Enterprise warehouse modelling as onsite delivery lead; ETL automation; Hive/HDFS proof of concept for call records.
Barclays	Banking UK	Emerging Markets warehouse and the One Africa programme — banking data unified across several African markets.
Telstra	Telecom AU	ETL for the retail customer warehouse — registrations, segmentation and call records.
